SIL-PROTEINS

PROMISE Proteomics is a pioneer and an expert in the development of Mass Spectrometry-based quantification methods and in the bioproduction of Stable Isotope Labelled (SIL) proteins.

Why use our SIL-proteins?

A Stable Isotope Labelled (SIL) form of an analyte protein is widely regarded as the optimal internal standard¹ for absolute quantification of proteins using LC-MS.

SIL-proteins correct bias (due to incomplete digestion, losses, adsorption, proteolysis, etc.) occurring during the preparation and the analytical workflow. With SIL-proteins, the accuracy and reproducibility of your quantification data is improved.

This product is useful for:

- Bioanalysis pharmacokinetics studies (clinical & non-clinical),
- Research & Discovery as well as pre-clinical & clinical Drug Development
- Biomarker's quantification

Characteristics

- **Full length recombinant proteins**
- **Identical to the protein of interest**, same sequence as the native protein
- **High isotopic incorporation, stability and purity**
- **Uniform (U¹⁵N) or specific labelling on Arg, Lys residues (¹³C¹⁵N isotope)**
- **Unlabelled option available**

How to use our solutions?

Unlike the use of SIL-peptides, PROMISE's SIL-proteins are processed along with the target analytes throughout the pre-analytical and LC-MS workflow thus improving robustness and quality of the quantitative data.

OFF-THE-SHELF PRODUCTS

SIL-proteins* are available to support your studies and clinical trials.

Your protein of interest is not listed? Please contact our experts for custom bioproduction.
